Student Number: xxx, Team: Design Zest, SC: Teacher

Abstract

I am a media design student currently working for branding our company with my team, **Design Zest** and will continue with the board games project, I decided to go with this project because we have a team of creative people and also 2 team members are actively playing board games, another 2 team members doesn't play often and 1 team member that is playing sometimes, with that we thought it will be a fun project to work with. For me personally I think with this project I will be able to challenge myself the most and experiment more and even if the final result is not the one, I desired it will be still one step closer. Over the past three weeks, I have been actively involved in branding, UI/UX design, and digital media production. My portfolio will be structured as a website. I chose this format because I think it will help me develop my skills with coding and, I enjoy it more.

My goal for this semester is to gain more knowledge in animations, 3D modelling and CSS.

Learning Outcome 1 - Conceptualize, design, and develop interactive media products

Self-assessment: Orienting

Moodboards and Stylescape -

<https://www.canva.com/design/DAGe5lFW2oo/2F1Y6sROJbArTizvWOpRQA/edit>

First, I did research on things that are defining our company's name, color schemes that match with us, typography, and design inspiration. Then I created moodboards to establish the visual identity of the company and proceed with the stylescape

Posters

Designed posters in **Adobe Photoshop & Illustrator** after getting inspirations on Pinterest and dribbble, had in mind the core values of our company and searched for more fresh, playful and animated colors.

User testing

Put all the posters on a whiteboard in our oil and then asked my peers to put a sticker on the poster they liked most, after that I told them about the company and asked them which one they think describe us the best.

Wireframe (Website Design)

<https://www.figma.com/design/E52N2bjzJayY2d3qgxJjRx/Untitled?node-id=0->

Built a wireframe of the website that I made for Design Zest and had some changes after feedback and more research, got inspirations from multiple design companies.

After Effects Logo Animation

Started drawing the logo in Adobe Illustrator each stripe on different layer so that later on I can animate it in after effects, used some effects from the tool to make it look like there is a zest falling also added a background that is going to match more in future, still in process. Showed it to the teachers and present it and got some feedback that will be implemented soon.

Learning Outcome 2 - Transferable production

Self-assessment: Orienting

Website Development for Design Zest –

<https://github.com/miya2004/webbrand>

The landing page animation was not made by me but everything else was coded by me, with every step I asked my teammates if they agree with the design and changes I make and also the inspiration I got from multiple websites for media companies, I tried to recreate some effects (the circles sections) that originally was made with animations etc. and I wasn't able to do it so I decided to recreate it with CSS keyframes and JS, also another interactive thing is the image gallery that is a 3d slider gallery where all of our posters are there. The website with the commits is in GitHub where everyone with the link can see it.

Website Development for Portfolio

The portfolio is not done in Figma but I did a simple landing page with the structure that I will use in future, each folder when clicked has it window that there will be a content and also for project and LO folder there are additional folders.

Learning Outcome 3 - Creative iterations

Self-assessment: Undefined

Logo Iterations - <https://www.canva.com/design/DAGe4N0mNjk/-0G2tvLtpF2B9wgCANn-0A/edit>

- When I came up with the name Design Zest I started searching for ideas for the logo and at first I thought it will be a nice idea the “Z” letter to be like a lemon but then I got a feedback that this won’t look nice on a website and also there are too much details, making it look more flat will be a good idea. Then my teammate proceeded to try it out but still it was too detailed. After that I decided to go on dribbble and see more modern logos and most of them are with shapes etc. I was scrolling and scrolling on Pinterest then saw an inspiration and added some shapes and at the end I got the final logo, I asked for a feedback but didn’t describe the logos to my teacher so I can see if the lemon made from the stripes and also the zester are visible and he did pointed it out that this logo looks the best from the others, After talking with my teammates we decided to go with it.

Learning Outcome 4 - Professional standards

Self-assessment: Orienting

Brand Guide

<https://www.figma.com/design/fQSvz7kuStIT8T4B0SEfH5/Design-Zest-Brand-Guide?node-id=0-1&p=f&t=KLIsnhrfRIH1cK7n-0>

The Brand Guide I started making it in a power point presentation so I can check all the boxes and share it in teams so all of us can edit, my part from the brand guide was the typography, core values and logo. Me and my team decided each of us to make a brand guide quickly and then decide which one is good so we can continue to enhance it together on one brand guide

Trello - <https://trello.com/b/pht3poY2/design-zest>

I made a Trello board where all the things we need to do are there and also that's how we track our progress and can see clearly the deadlines, we also assigned some of the tasks so at the end we don't end up with miscommunication and have unfinished tasks.

Team Chart -

Learning Outcome 5 - Personal leadership

Self assessment: Undefined

Skill Growth in Adobe Tools

Reflection

My reflection for now is that I did use the tools like after effects photoshop like I wanted but I didn't use them enough. For the After effects animated logo, I am happy with the result even if it's a small animation. The website for me looks not really good appearance wise but if I had more time and I still have I will add more details so it can look better, I will continue exploring the creative cloud package and hopefully do more in blender, but for this 3 weeks I am happy with the things I have done.
